DETAILED ACTION

This is responsive to Applicant's amendment filed on 12/5/06. Examiner Upon consideration and review of the Applicant's amendment with argument, all the previous rejection and objection have been withdrawn and the following rejection has been made. Any inconvenience to Applicant is regretted. This Office action is made non-Final.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-5, 7-14, and 16-19 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Almi [USPUB 20020020806, applicant's submitted prior art].

Almi discloses an optical device comprising: a plurality of optical fiber arrays [fig. 8]; a signal detector [page 3, ¶0042] having an input [from the optical fiber arrays]; and means for connecting 18 [fig. 6].

In re claim 2, optical delay is clearly shown in fig. 2.

In re claims 3 and 9, fig. 6 shows different fiber bundles are merged into a single fiber 18 to reach optical detector 6, therefore, the connection in series by respective optical delays are shown in fig. 6.

In re claim 4, fig. 8 shows each array group has a respective array group output, and an array group output of one array group is connected to an input to another array group.

In re claim 5, optical delay is shown in fig. 9.

In re claims 10-14, 16-19, and 21-24, the similar claimed structural limitations are greatly discussed in above rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 6, 15, 20, and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Almi.

Almi discloses every aspect of claimed invention except for the optical switch.

Official Notice is taken that optical switch between the input and output of the optical device for the purpose of controlling the output of the device result is old and well known in the art. See In Re Malcolm 1942 C.D. 589:543 O.G. 440 MPEP 706.02 (a).

Therefore, it would have been obvious to the ordinary skilled person in the art at the time the invention was made to modify Almi's device to include the optical switch before the optical detector for the purpose of controlling the output of the optical device.
